

Two seals to prevent leaks

Stainless-steel rotary ball valve

Perfectly angled flush-mounting
stainless-steel clamping ring

Solid brass body

2" NPT Male & 1-1/2" NPT Female outlet
threads so no adapters are required

1/4 turn fully opens and closes valve

DRAINKing™

Elevating the standard for all drains in the industry, the Fisher DrainKing™ is above them all. The DrainKing™ uses the twist mechanism you're most familiar with to open and close a ball valve instead of the pop-up mechanism with O-rings that eventually deteriorate. The stainless-steel rotary ball valve is an innovative solution that is virtually leak proof. Two sized threads are used at the connection, which means no need for any additional adapters. Engineered for unparalleled durability, reliability and longevity to provide you with the quality your operation needs.
